AI Assistant User Guide

- Integrated AI Assistant with Multiple Functions
- Name: Tirumani Devi Sri
- Email:tirumanidevisri2003@gmail.com
- Date:30-8-2025

Introduction

- An AI-powered assistant that:

- - Answers questions

- - Summarizes texts

- - Generates creative stories

- Built with Google Gemini AI for intelligent responses

Features

- - Single program, multiple functions

- - Intuitive command-line interface

- - Varying prompts for diverse outputs

- - Feedback mechanism to improve responses

How to Use

- 1. Run the Python program in your terminal

- 2. Menu options will appear:

-   - Answer a Question

-   - Summarize Text

-   - Generate Creative Content

-   - Exit

- 3. Enter the number of your choice → follow the prompt

Functions

- - Answer a Question → AI-generated explanations

- - Summarize Text → concise summary of input text

- - Generate Creative Content → imaginative short stories

Feedback & Technical Details

- - After each response → user gives feedback (Yes/No)

- - Built with Python + Gemini 1.5 Flash model

- - Prompts designed for variety & clarity

Future Enhancements

- - Save logs & feedback automatically

- - Add GUI / Web app interface

- - Extra AI-powered features (translation, recommendations, etc.)

- - Continuous improvement with user input
